

Pathway Wire Sharing System Product expansion

The Pathway provides a reliable, cost effective method to add flow monitoring and control to installed systems where existing pavement, hardscape or other landscape features make conventional wiring prohibitively expensive. Our Patent Pending technology allows the flow sensor data and master valve control to be carried over existing zone valve wire already in the ground. Due to the great success of the SO1 version for CST frequency output flow sensors, we are expanding the Pathway capabilities with a new model.

PATHWAY Model PWY-400-H02

For use with pulse/gallon contact closure output devices

This model allows any water meter or combination valve/meter device equipped with a reed switch type of output to be connected to a smart controller's flow input.
